

Child's play

Right on target

HARDER
logistics

Our vision

Opportunities in challenging niche markets

Logistics companies and systems suppliers prove to be indispensable partners in a dynamic and increasingly flexible business environment.

Complete business relocations in particular, as well as installation and dismantling of complex equipment, are an integral part of companies' continual adaptation processes.

We recognised early on the importance of being an integrated service provider, covering all individual steps of the relocation process in theory and practice from one source. Our staff and our logistics infrastructure are prepared for challenging relocations.

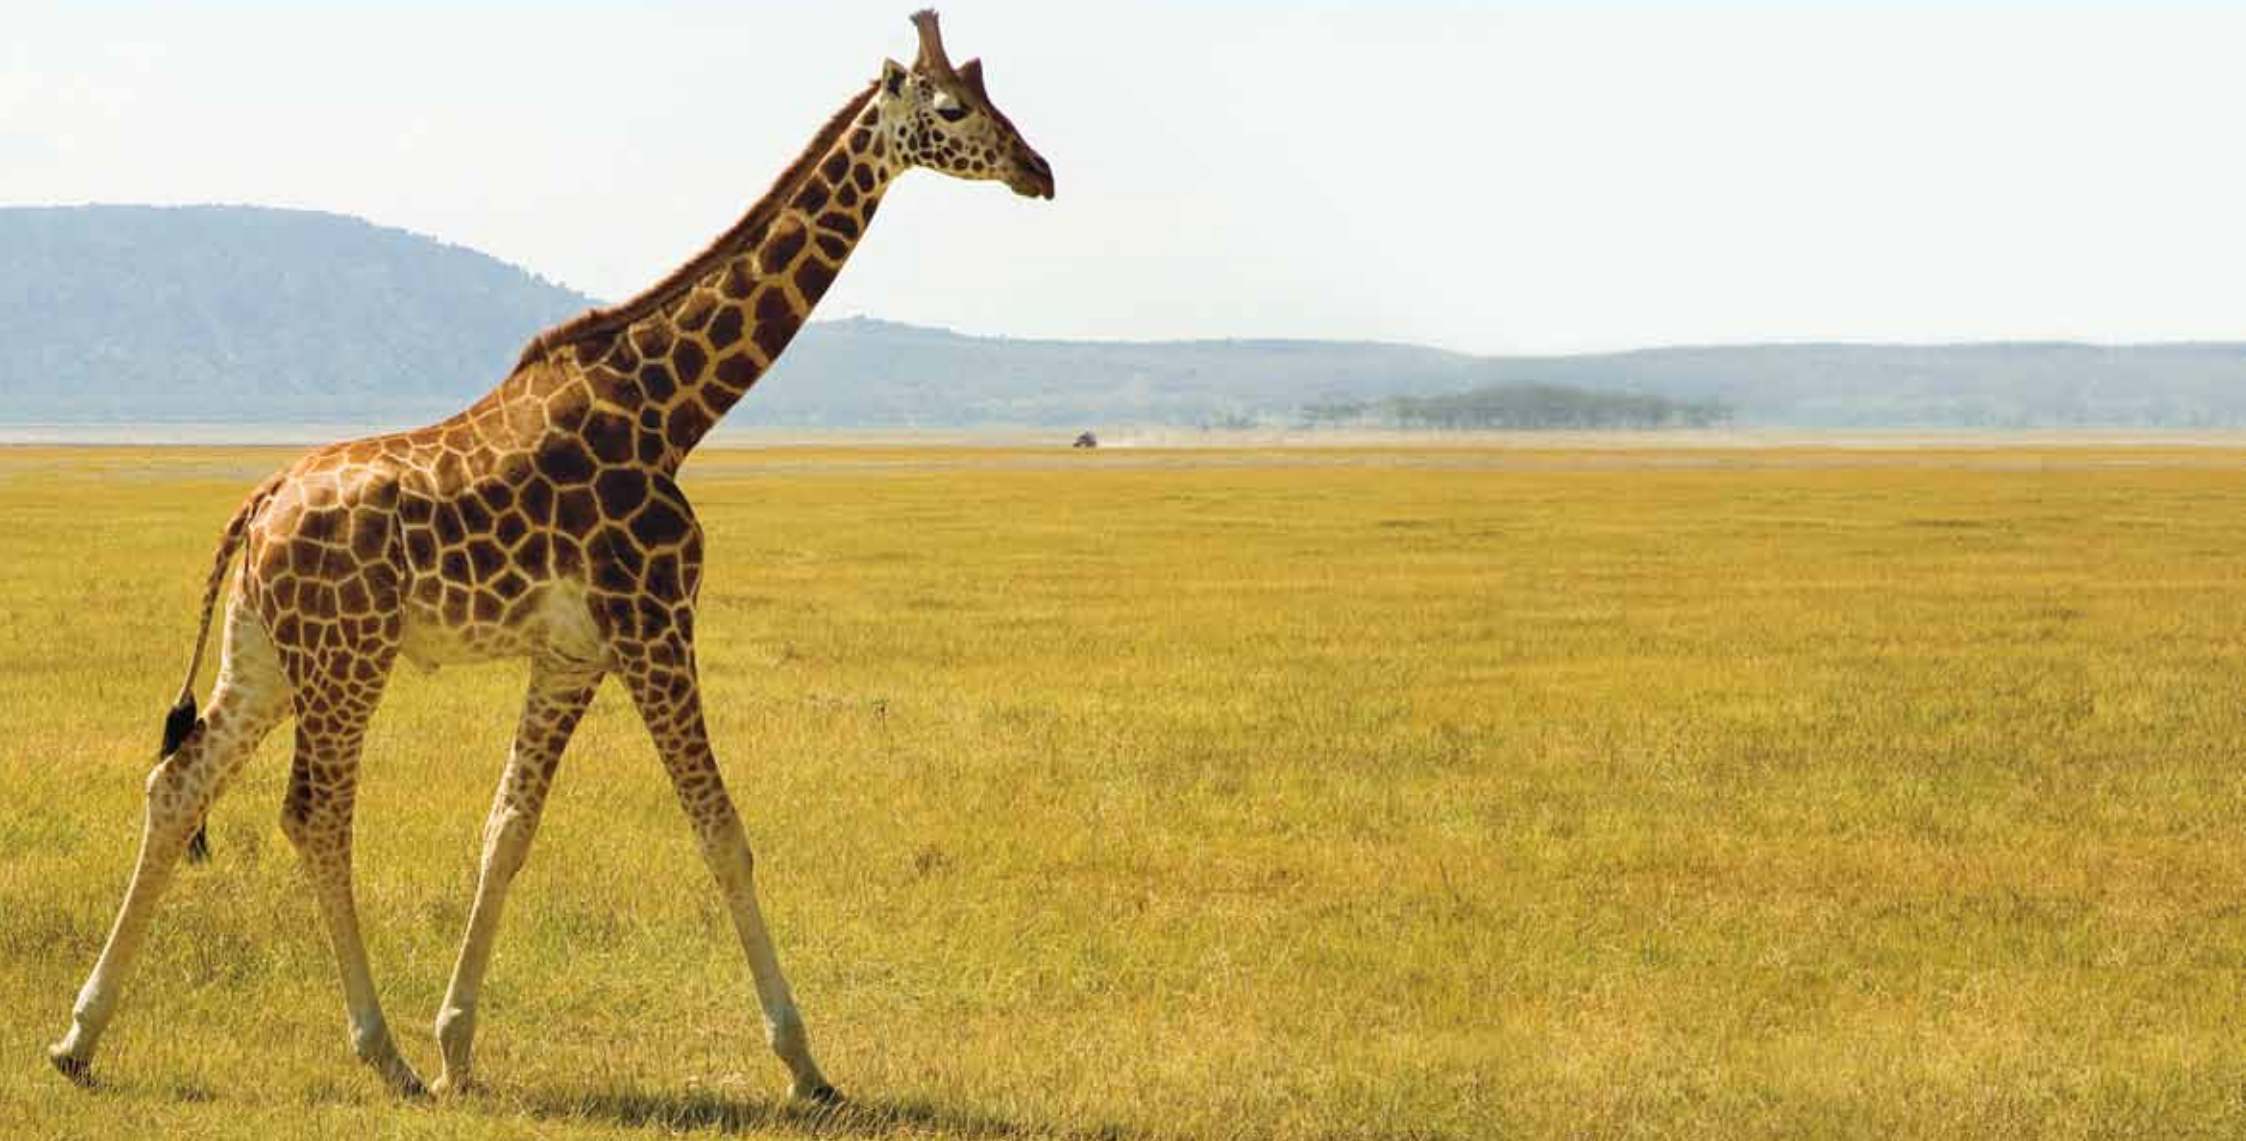

Our future goal is consistent internationalisation of our specialised services.

In addition to our core expertise of special services and solutions for customers, we also offer standard services such as furniture removals and storage.

HARDER logistics – your expert partner with comprehensive packages and optimum customer service

Why do we think big?

Business relocations

Planning and executing complex processes

We specialise in executing relocations precisely according to the jointly defined parameters, and using outstandingly trained staff and the right equipment.

“Relocation only works as well as the planning that precedes it.” Ideally, we do this over the weekend, so your employees can hit the ground running at the new location on Monday morning. This means no loss of time and working hours for you.

- Relocation of production halls, factories and even complete sites.
- Specialising in planning and executing complex and challenging relocations
- Flexible realisation of the most diverse projects

Why are we the best people
to take care of your goods?

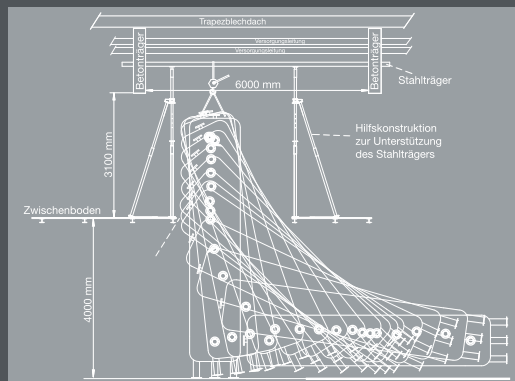

Industrial dismantling and re-assembly

Transport of machinery and production plants

In addition to the right equipment, transporting large machinery or a complete industrial plant requires a lot of preparation and intuition during the execution phase. Our services begin with planning the disassembly and end with commissioning at the new site, regardless of whether this is next door or on another continent.

- Comparison of target and actual situation at the original and new site
- Planning for cabling and for protective measures (special or overseas packaging) for transport
- Professional dismantling, transport in the best possible packaging and re-assembly

We use all relevant technologies for installations: electrical, electronic, mechanical, pneumatic, hydraulic, plus SPS programmes and calibration with appropriate measuring equipment

Why can you stop looking?

Equipment removals, special transports, file archiving

Offices, local governments, labs

When relocating files, PCs or lab equipment, everything at the new location should be in place on the same desk or on the same shelf as it was before the move. To handle these sensitive items we use rolling containers (partly lockable) or PC chests with electronic content recording on request.

- Secure transport of sensitive electronics, such as servers or lab equipment
- Access for your employees to the contents of the rolling containers on the day of the move
- Professional carpentry for dismantling and re-assembling furniture, and for alteration work at the new site
- Professional file and document storage with data capture, including preparation and disposal service

We find a solution for every special transport thanks to our years of experience and the right equipment

A large flock of birds, likely geese, is flying in a V-formation against a clear, light blue sky. The birds are positioned in the left and bottom-left areas of the frame, with their wings spread, creating a sense of movement and direction. The text is overlaid on a white rectangular background in the upper right quadrant.

Why are we the best choice
wherever you're going?

Private removals and storage

Domestic, foreign, self-storage

Moving abroad or even to another continent means dealing with bureaucracy, particularly in countries outside the EU and for overseas transports. We are also experienced at dealing with customs regulations and can also overcome language barriers for you.

- Full house removals within Germany and abroad with assembly and carpentry work for all furniture and electrical equipment.
- Self-storage: secure short or long-term professional furniture storage in our special storage containers (e.g. during extended stays abroad or because you need some space) on our site
- We supplement storage capacity as an outsourcing partner for firms

Professional warehousing in containers or halls for firms and private customers at our sites in Vöhringen, Neu-Ulm und Leipzig

Trust and partnership

Effective cooperation

“Individual solutions – perfectly tailored to the standards and needs of our customers. That is our passion and our intention.”

Marcello Danieli

“A new logistical challenge every time – that is really exciting. Thanks to our technical know-how and our years of experience, we bring every project to a successful conclusion.”
